

Abstract

A connection carrier (1), in particular a connection carrier (1) for the bobbins of solenoids, having a positioning section (5) for positioning the connection carrier (1) in a recess (15) of an injection-molded part (2) surrounding the connection carrier (1); and having a locking section (6) projecting over the width of the positioning section (5) for anchoring the connection carrier (1) in the injection-molded part (2).
